MARKING SOLUTIONS -
MADE IN GERMANY

REA JET Bio Cleaner BC-1 400

REA JET expands its product portfolio of liquid cleaners

We are now able to offer our customers a non-flammable universal cleaner, suited for contaminated workplaces and operating equipment without the hassle of label requirements.

Virtually anywhere where inks, primers and paints are used for coding and marking purposes, at some point production facilities and production environment have to be cleaned periodically.

Up until now, most companies have been accustomed to using solvent-based cleaners which are required to be marked if it contains hazardous or health damaging substances.

Since most solvents are classified as flammable, strict safety precautions must be taken for handling, storage and transportation.

With the new REA JET BC-1 400 cleaner most of dried inks, primers and paints – not only those from REA JET – can be turned back into liquid form and then removed.

REA JET Bio Cleaner is perfect for all customers who:

- Are operating with ink and paint based marking systems
- Have high safety regulations
- Are required to comply with VOC requirements
- Currently have a high solvent consumption
- Have on-site fire load regulations
- Have high health awareness, environmental awareness and safety awareness
- Feel responsible for occupational safety

How to use the product?

- In liquid form, without using a spraying device
- Apply and allow briefly to react
- Depending on degree of contamination leave to work for a few seconds or even minutes
- Absorb dissolved ink and paint residues with a cloth

For external use only. Do not use for cleaning print heads and ink supplies, ink tubes, etc. to avoid the risk of later incompatibility with inks and paints.

REA JET BC-1 400 does not replace the existing cleaning agents for flushing our printing systems. The possibility of use as an external replacement cleaner must always be checked beforehand.
